Definition of Done

Team Tapscott

We have categorized our definition of done into the three topics: Code, Sprints and Documentation.

Code

- Code is produced for presumed functionalities
- The project is compiled without errors
- Each feature is tested against acceptance criteria
- A code review has been performed by at least one *Software Engineer* student

Once all of these requirements are met, the functionality can be marked as "Done".

Documentation

- Documentation is written in english
- Spelling and grammar are correct
- Has been reviewed by at least one other team member
- All documentation is written according to the guidelines of the project manual
- The documentation doesn't go outside the subject its scope

Once all of these requirements are met, the functionality can be marked as "Done".

Project

- The application is hybrid, it supports both iOS and Android. React native is used to achieve this
- The application is a proof of concept for fiat payments within a blockchain.
- Users can put products up for sale using a blockchain technologies
- Users can purchase products from other users using fiat payments within the blockchain
- Money transfers will only go through once the product has been received by the recipient.
- Paypal will be used to make transactions within the blockchain/application.
- The delivery person can use the app to scan a QR code, finishing the delivery process after which the payment will be sent through to the company.
- The apps display language will be english.
- Our findings will be documented towards the product owner
